Index Components

- Nav bar links with animated hover features: yellow colour choice matches colour theme in Index background image

- Free sourced nav image that links back to Index: animates in frame

- CSS animated Name & Title headings with text shadow effect (for visibility)

- Background image sourced from personal photography

# Wireframe Mockups - About Me

It's a me!

Background image sourced from personal photography

About Me Components

- Flex box containers that hold two boxes placed side by side containing description of myself and skills/experience: animates into frame

- CSS button in second container under skills description: links to Resume

- Profile image in first container: animates when you hover

- Tech stack (HTML & CSS) logos with caption text: animates when you hover

- In **mobile/tablet responsive view**, containers will stack into a single column

Wireframe Mockups - Projects

Background image sourced from personal photography

Images sourced from Unsplash

Project Components

-   Heading: animates in frame

-   Four flip cards displayed in grid using flexbox: hovering will flip cards over to display project title and description (placeholder)

-   In **mobile/tablet view**, tapping on cards will flip it over

-   When scrolling in **mobile/tablet view**, flip cards will stack in a single column

Wireframe Mockups - Blog

Background image sourced from personal photography

Blog Components

-   Five containers displayed using flexbox with simple sample blog posts including title, date published and image

-   In **mobile/tablet responsive view**, containers will wrap and stack into a single column

Wireframe Mockups - Contact

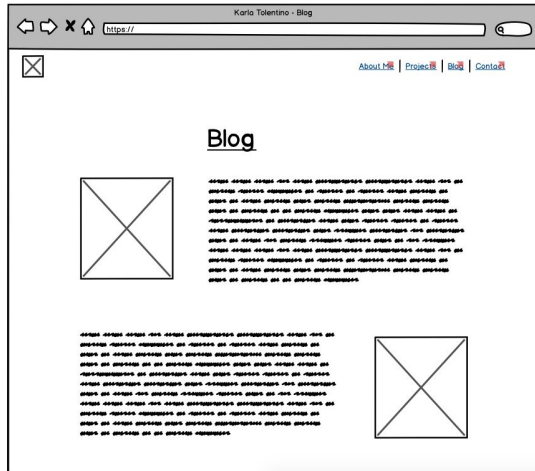

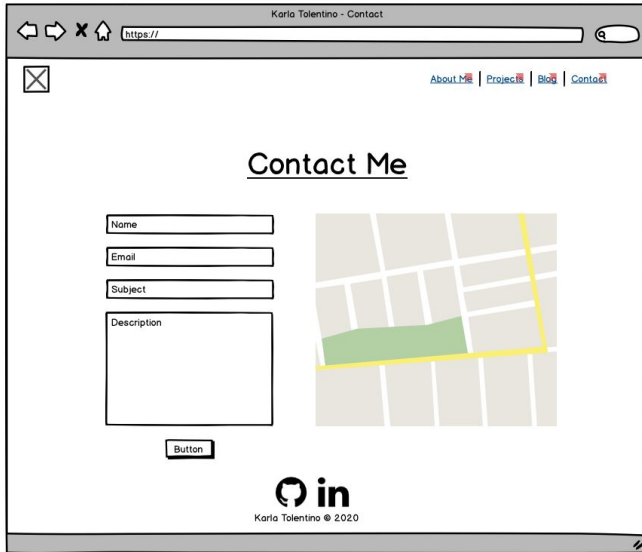

Background image sourced from personal photography

Contact Components

- Heading: animates into frame

- Contact form requiring input for name, email, subject and description

- Submit button for contact form: hover effect

- Footer with copyright and social link graphics to GitHub and LinkedIn: animates when you hover over them
    - clicking on social graphics open links in new tab

- In **mobile/tablet responsive view**, containers will stack into a single column
    - Map will decrease in size until it is in mobile view, where it is completely hidden

Review

Challenges

- Being aware of padding/margin errors that will push contents out of page
- Ran into a few issues with flexbox for project layout, couldn't get each flip card to utilise space on page to my liking
- Responsive issues with flip cards
- Choosing images

Favourite parts

- Choosing landing page image and colour theme
- Discovering font "Poppins"
- Adding CSS animations on interactive components
- Getting the media queries right in mobile/tablet view!
